

Summer 2020

A message to our valued customers, partners, and community members:

Given the strain on organizations to remain functional during this time of uncertainty, Klarion is here to support you. We are doing everything possible to help you operate safely and sustainably to ensure the health and well-being of your employees, constituents, and community. Please know that:

Klarion is always open. Designated an essential business, we continue to do the following:

- Increase production capacity for on-site-generators (OSG) and hire employees
- Always ship new OSG and supply orders the same day, whenever possible
- Introduce new application equipment such as the FogJet® line of misting carts

Klarion sanitizer is an effective disinfectant. The active ingredient in Klarion sanitizer is hypochlorous acid, at a concentration of .018%. Klarion sanitizer has proven effective against a wide range of bacteria and viruses, including Norovirus, which is widely known as one of the most difficult to kill. See this link for all our efficacy data and rest assured Klarion sanitizer is an essential disinfectant for a clean workplace.

Using Klarion equipment mitigates risk. Increased toxic chemical use increases the risk of adverse reactions. Klarion solutions are gentle on people — non-irritating to eyes and skin, free of added fragrances and other additives. In addition to reducing health risks, Klarion on-site generation gives you complete control of your supply of cleaners and disinfectants. When things get bad, you won't be scrambling for critical cleaning supplies and paying inflated prices. That is real risk reduction.

Klarion service and site support are available every day. Our team is located throughout the US. We are local and can work with you on-site to address your unique cleaning needs. Because our OSGs have IoT capabilities, we also preventatively service systems and monitor performance, so you don't have to.

We are here to serve you and together we will get through this.

William J. Kohley
President, Klarion
